PROFESSIONAL SUMMARY

Full-Stack AI Engineer delivering end-to-end intelligent systems RAG, autonomous code execution, and multi-agent frameworks (CrewAI) with Python, LangChain, FastAPI, Next.js, and Google Cloud Platform.

EXPERIENCE

❖ Web Development Intern | Teachnook Edutech

Aug '24-Jan'25

Improved UI performance by 20% using React.js and optimized load times. Later contributed to backend API development in Node.js, collaborating in a cross-functional team using Git and Postman.

❖ Hackathon – Advanced to Round 3 of Flipkart Grid 6.0 Hackathon, showcasing strong problem-solving skills. Collaborated on real-world software challenges with a focus on algorithms and innovation.

PROJECTS

❖ OmniLeap – Full-Stack AI Agent

Aug '25 |  | Live 

AI agent with long-term memory, autonomous tools, and multi-agent collaboration and other features.

Features-

- **Architected** a secure, scalable backend API using **Python, FastAPI, and Docker**, deployed on a serverless **Google Cloud Run** architecture.
- **Engineered** a **Retrieval-Augmented Generation (RAG)** pipeline with **ChromaDB** and **Firestore** to provide the agent with a persistent, searchable long-term memory. Created **REST APIs** for booking, cancelling, viewing rides, and assigning drivers
- **Built** a **Code Interpreter** tool, enabling the agent to autonomously write and execute its own Python code to perform data analysis and create visualizations with **Matplotlib**
- **Implemented** a **Multi-Agent Collaborative System** with **CrewAI**, allowing the agent to delegate complex tasks to a specialized team of AI agents.
- **Developed** a secure user authentication system with **Firebase Authentication**, supporting email/password and **Google social logins**.

❖ Uber – Ride Booking (Backend API)

Mar '25 |  | Live 

Engineered a reliable ride-booking backend system with a focus on stability, speed, and performance under load.

Features-

- Developed & deployed a secure, scalable backend API inspired by Uber using **Java, Spring Boot, PostgreSQL**
- Implemented role-based **JWT authentication** for Rider, Driver, Admin
- Created **REST APIs** for booking, cancelling, viewing rides, and assigning drivers

TECHNICAL SKILLS

❖ Languages: Java, Python, TypeScript, JavaScript, Html, CSS

❖ AI & Machine Learning: LangChain (Agents, RAG), Multi-Agent Systems (CrewAI), Vector Databases (ChromaDB), Code Interpretation, LLM Integration (Gemini, Groq), Pandas, Matplotlib

❖ Backend: FastAPI, RestAPI, Python, Springboot

❖ Frontend: React.js, Next.js, Tailwind CSS

❖ Database: Firebase Firestore (NoSQL), PostgreSQL

❖ Cloud & DevOps: Google Cloud Platform (GCP), Docker, Google Secret Manager, Git, GitHub

EDUCATION

❖ High school – City Montessori School

Percentage: 70% | (2019)

❖ Intermediate-Central Academy

Percentage: 79.2% | (2021)

❖ Bachelors of Technology in Computer Science Engineering from Galgotia's University

CGPA: 7.17 | (2021-2025)
